

In the Claims

1. (Currently Amended) A nucleic acid sequence comprising:  
P<sub>x</sub>-S<sub>x</sub>-B<sub>n</sub>-(ZR)-Hir(As<sub>m</sub>R)-protein(Y)-T  
where  
P<sub>x</sub> is a promoter sequence;  
S<sub>x</sub> is a nucleic acid encoding a signal sequence or leader sequence;  
B<sub>n</sub> is 1-15 codons, when n is an integer from 1 to 15, or a chemical bond, when n=0;  
Z is a codon for lysine or arginine;  
R is an arginine codon or a chemical bond;  
Hir is a nucleic acid sequence coding for hirudin or a hirudin derivative which is at least 40% homologous to a natural hirudin isoform;  
As<sub>m</sub> is a chemical bond, when m=0, or 1-10 codons, when m is an integer from 1 to 10;  
protein(Y) is a nucleic acid sequence encoding a protein that is produced in and secreted by yeast; and  
T is an untranslated expression-enhancing nucleic acid sequence.
2. (Original) The nucleic acid of claim 1, wherein protein(Y) encodes for mini-proinsulin or a derivative thereof.
3. (Original) The nucleic acid of claim 1, wherein protein(Y) encodes for interleukin, lymphokine, or interferon.

Claims 4 to 6 (Cancelled)

7. (Original) A multicopy vector comprising the nucleic acid of claim 1.
8. (Original) A plasmid comprising the nucleic acid of claim 1.
9. (Original) A host cell comprising the nucleic acid of claim 1, as part of the host cell chromosome, as part of a mini-chromosome, or extra-chromosomally.
10. (Original) The host cell of claim 9, wherein the host cell is a yeast.
11. (Original) The host cell of claim 10, wherein the yeast is selected from *Saccharomyces cerevisiae*, *Kluyveromyces lactis*, *Hansenula polymorpha*, and *Pichia pastoris*.
12. (Original) A host cell comprising the multicopy vector of claim 7.
13. (Original) A host cell comprising the plasmid of claim 8.
14. (Currently Amended) A process of fermentative production of fusion protein; comprising: expressing the nucleic acid of the host cell of claim 9 to form the fusion protein in a fermentation supernatant of a cell culture; ~~and isolating the fusion protein from the fermentation supernatant of the cell~~ culture.

Claims 15 to 20 (Cancelled)

21. (New) The process of claim 14 comprising further the step of isolating said fusion protein from said fermentation supernatant.
22. (New) The process of Claim 21 wherein said step of isolating the fusion protein comprises adjusting the pH of said fermentation supernatant to about 2.5 to 3.5 to precipitate non-desired proteins and form a precipitation supernatant and isolating the fusion protein from said precipitation supernatant.
23. (New) The process of claim 14 further comprising the steps of: (A) separating the fermentation supernatant from the host cell; (B) culturing the host cell in fresh medium; (C) separating the resulting supernatant from the host cell; (D) repeating steps (B) and (C) several times; and (E) isolating the fusion protein from the aforementioned supernatants by adjusting the pH of said supernatants to about 2.5 to 3.5 to precipitate non-desired proteins and form a precipitation supernatant and isolating the fusion protein from said precipitation supernatant.
24. (New) The process of claim 21, wherein the step of isolating the fusion protein comprises precipitating the fusion protein from the fermentation supernatant, and comprising the additional steps of releasing the protein encoded by protein(Y) from the fusion protein and concentrating said protein encoded by protein(Y) by microfiltration, hydrophobic interaction chromatography, ion exchange chromatography, or a combination of such procedures.
25. (New) A process of fermentative production of fusion protein, comprising expressing the nucleic acid of the host cell of claim 12 to form the fusion protein in a supernatant of a cell culture.

26. (New) The process of claim 25 comprising further the step of isolating the fusion protein from the supernatant of the cell culture.
27. (New) A process of fermentative production of fusion protein, comprising expressing the nucleic acid of the host cell of claim 13 to form the fusion protein in a supernatant of a cell culture.
28. (New) The process of claim 27 comprising further the step of isolating the fusion protein from the supernatant of the cell culture.
29. (New) A process of claim 14 wherein protein(Y) encodes for mini-proinsulin or a derivative thereof.
30. (New) A process of claim 21 wherein protein(Y) encodes for mini-proinsulin or a derivative thereof and further comprising the step of releasing insulin by treating said fusion protein with trypsin and carboxypeptidase B.
31. (New) A nucleic acid sequence of claim 2 in which (As<sub>m</sub>R), taken together, is an arginine codon.
32. (New) A nucleic acid sequence of claim 2 in which (As<sub>m</sub>R), taken together, encodes Gly-Asn-Ser-Ala-Arg.
33. (New) A nucleic acid sequence of claim 2 in which P<sub>x</sub> is a yeast ADH2 promoter, S<sub>x</sub> is an  $\alpha$  factor leader sequence, Hir encodes hirudin or lepirudin, (As<sub>m</sub>R), taken together, is either an arginine codon or encodes Gly-Asn-Ser-

Ala-Arg, and T is the 3' segment of the sequence coding for bovine interleukin 2 which remains after cleavage thereof with NcoI restriction enzyme.
